DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remark, filed 7/5/2007, with respect to the rejection(s) of claim(s) 1-2,5-6 under 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Do et al. (US 6882075).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2,5-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Do et al. (US 6882075)

Regarding claim 1, Do et al. (see figs. 3-7) disclose a linear compressor, comprising: a mover reciprocating together with a piston to compress a refrigerant; and a stator generating a magnetic field to interact with the mover, the stator comprising a core (100) provided with an opening at outside thereof, two extended parts (112) extended inward from both ends of the opening of the core to cover portions of the opening and to be spaced apart from each other, and a coil (320) wound in a space inside the two extended parts and a space between the two extended parts (112).

Regarding claim 2, Do et al. disclose the coil is wound in a shape corresponding to shapes of the two extended parts.

Regarding claim 5, Do et al. disclose a linear motor, comprising: a stator comprising a second core provided with an opening at outside thereof, two extended parts (112) extended inward from both ends of the opening of the second core to cover portions of the opening and to be spaced apart from each other, and a coil (320) wound in a space inside the two extended parts and a space between the two extended parts; a first core (200); and a magnet reciprocating between the stator and the first core.

Regarding claim 6, Do et al. disclose the coil is wound in a shape corresponding to shapes of the two extended parts.
